

Sprint 2 Review

Sprint Goal

The Sprint 2 goal is to construct the base framework of the app, such as implement login authentication and user management, and the basic functionality of the app, providing appointment features and resources of information regarding the treatment and illness.

Demos

The mobile app cannot be deployed at this stage, as we do not have finalised details for logging in to the google playstore and app store accounts required. The backend and web app are temporarily hosted at the team's own private server. The web app can be seen at "<http://mymedicalsecretary.uk.to:3000/>", and the backend API can be accessed at "<http://mymedicalsecretary.uk.to:8080/api/REQUEST>". However, this server is not as reliable as the AWS server they will eventually be deployed on, so there are occasionally issues with accessing these hosted resources. Given this, a video of the web and mobile apps is available for viewing in the demo section above.

Demo	Feedback & next steps
Login as Patient	Good
Login as Admin	For the Home Page, instead of blank, it can be Document upload page or Patient appointment page, but it can up to us
Patient functionality from Admin side	Good
Appointment functionality from Admin Side	Good
Upload File from Genie HTML	Good
Medical Institution Facility Feature	Delete functionality on Facility shouldn't be removed
Doctor Feature	When appointment is to be failed if Doctor does not exist, it should fail entire thing
Appointment from Patient	Good, but full Doctor details doesn't need to be in appointment. It can be just in Doctor page.
Calendar View	Has option to switch list of all appointments (in addition already existing calendar)

Summary of Feedback

Susan's overall opinion was very positive for both web app and mobile app, specifically she likes about the simplistic UI and intuitive functionality. Few points of improvement are suggested, mostly about Quality-of-Life improvement, for example has option to see appointment in a list, and doctor details shouldn't be in appointment and just to be in separate, but accessible page.

Complete Tasks

- Login feature
- Upload File (patient and appointment) feature
- Appointment and its details feature
- Basic resource feature

Upcoming

- Notification feature
- Integration to phone's calendar
- Email service
- Sharing features from web app
- Fully deployed on app stores

Video of Meeting
